PERFECT IMPLANT PLANNING
FOR BRIGHT SMILE

Neo NaviGuide System

Implant Surgery becomes easier, better and faster
with the Neo NaviGuide

1

Accuracy

More predictable implant placement can be done as the implantologist's treatment plan becomes a clinical reality with Neo NaviGuide.

2

Saving Time

Neo NaviGuide was produced by predicting the implant position in advance, which can reduce the surgical time.

3

Convenience

Through the dedicated web site, simple order process, fast fabrication through expert and delivery service to use conveniently.

4

Reasonable Price

Economical and reasonable prices are offered.

5

Positive implant experience for patients

Patient who has experienced safe and pain-less digitized implant surgery will make a positive decision when he needs to decide for another implant surgery.

Why Neo NaviGuide?

Minimally Invasive Surgery

Flapless surgery allows for fast recovery with less swelling and bleeding.

Advanced surgical aids device

Prediction of the implant position and surgery without incision using surgical aids.

Fast surgery, Fast recovery

Flapless surgery can reduce the operating time and shorten the total treatment period through faster recovery.

3D computer simulated surgery

By identifying the location of the alveolar bone and nerves before surgery, to plan and to simulate safe implant placement.

Anytime Loading

Neo NaviGuide is a digital-based implant solution that aids implantologists in achieving the best implant treatment.

The CMI Fixation concept of Neobiotech implants enables anytime loading as well as immediate loading to provide the most satisfactory treatment for both patient and implantologist.

Neo NaviGuide **Process**

The digital-based workflow of the Neo NaviGuide solution enables faster and more convenient communication and reduces the burden on the implantologist at a reasonable cost.

Neo NaviGuide Drilling Sequence

Step
1

Fix the Guide using the Vertical Anchoring Tool.

Step
2

Remove the soft tissues using Tissue punch and flatten the bone level by removing crestal bone.

Step
3

Accurate drilling is performed using the initial drill at the implant placement location.

Step
4

Secure the space for the implant to be placed using a Stop drill, Countersink drill, and Profile Tap Drill.

Step
5

Insert the implant using Implant Connector, Fixture Driver, Fixture Mount.
